

## *A Message from the Dean*

At San Francisco State's College of Science and Engineering, students find faculty who encourage breaking traditional barriers. The faculty of the College are committed to creating and maintaining connections with our students, other scientists and engineers, and to the scientific community of the Bay Area. In so doing, we act as the vital link connecting students to the world of science.

The college is committed to the philosophy that the best education of its students comes through involvement in research and the solution of real-world problems.

To carry out that objective, we must recruit and retain outstanding scientists and engineers to our faculty and be able to offer them and their students the most advanced facilities and equipment possible.

In addition to our active research faculty, we have many state-of-the-art facilities and research centers that offer unique research experiences for students at all levels, from undergraduate to post-doc: the Conservation Genetics Laboratory, the Romberg Tiburon Center for Environmental Studies, a DNA analysis facility, a Thin Film Laboratory, an electron microscope facility, a computational chemistry and visualization laboratory, a molecular biology core facility, and the Nuclear Magnetic Resonance Center.

## **A Setting That's Ideal**

Few places in this country can match the San Francisco Bay Area for the depth and caliber of scientific and technological research.

The College of Science and Engineering endeavors to help its students benefit from this distinctive environment. Our students learn through research opportunities, internships, cooperative education, and other training placements.

We offer a strong and diverse faculty, many of whom are experts from industry or the research community, with a growing staff of minority and women professors and mentors, an important component of an urban university.

Many of our students are first-generation Americans. Many are the first in their families to go to college. More than half of our students are members of minority groups, and one quarter are from groups traditionally underrepresented in engineering and the sciences.

Providing the means for people of exceptionally diverse backgrounds to come into their own is a major part of San Francisco State's identity as an urban university. The College of Science and Engineering has been a leader in increasing the number of underrepresented minority students in science- and mathematics-based fields, from elementary to graduate school.
